

In []: Training Day 22 Report- 14 July 2025

Introduction

Day 22 covered ransomware as a business-impacting threat and introduced incident response concepts for containment and recovery.

Key Concepts Discussed

We discussed ransomware lifecycle: initial access, lateral movement, data encryption, extortion. The importance of immutable and tested backups was emphasized.

Lab Preparation in Theory

The class examined tabletop exercises and recovery plans without running live ransomware. Emphasis was on containment, forensic preservation, and communication during incidents.

Practical Understanding (Theory)

We reviewed defensive architectures, segmentation strategies to limit blast radius, how to prepare playbooks for rapid restoration.

Key Takeaways

Preparation, backups, and practiced recovery are the best defenses against ransomware damage.

Conclusion

Next day we will look at trojans and persistence mechanisms.
