

In []: Training Day 25 Report- 17 July 2025

Introduction

Day 25 introduced security policies, governance, and compliance concepts - the organizational glue that ensures technical controls are applied consistently.

Key Concepts Discussed

We discussed acceptable use policies, access control policies, audit requirements, and the role of documentation in enabling repeatable security processes.

Lab Preparation in Theory

The trainer guided students to draft a simple incident response policy outlining an access control policy framework in theory, stressing alignment with business objectives.

Practical Understanding (Theory)

We examined how policies translate into technical configurations and monitoring, and how regular reviews keep policies current and enforceable.

Key Takeaways

Policies are necessary for consistent security operations; they must be practical and enforceable.

Conclusion

The following topics will tackle detection systems and log-centric security.
